ABSTRACT

Materials on environmental pollution published by the various offices of the federal government are presented in this select bibliography. Limited in scope to publications on air, water, and land pollution, the document is designed to serve teachers and researchers working in the field of environmental problems who wish reference to public documents. Each section is divided into two parts: (1) reference books including abstracts, bibliographies, directories, guides and handbooks, and laws and regulations; and (2) general publications from the departments, office of the President, independent commissions, and Congress. The entries, many with brief abstracts, list title, source or agency, date of publication, number of pages, and Superintendent of Documents call number. (BL)

FOREWARD

This document results from a confluence of several developments at Western Michigan University. An evolving interest of faculty in the concept of ecology and environmental problems brought more than thirty of us together in the Winter of 1970. From that first meeting, called by Dr. James Zietlow, Associate Dean of the College of Liberal Arts, there was formed a faculty committee (with one student member) which entitled itself, "The Committee on Environmental Programs". While the precise character of the Programs which could eventuate from the Committee were at first unknown, we assumed they would be educational in nature, thus, we discussed mobilizing sources of materials for our research and teaching interests.

We were aware that the Federal government had produced a large number of documents which were wide ranging in content and useful to both researchers and teachers. We knew as well the difficulty of locating such materials without some help, and we noted that most bibliographies in this field did not include public documents. We therefore concluded that a bibliography of recent documents issued by the Federal government would be a worthwhile contribution to those teachers and researchers working in the field of environment problems, not only at Western Michigan University but elsewhere. We obtained some financial support form the College of Liberal Arts and we asked Dr. Louis Kiraldi, Head of the Documents Department, Dwight B. Waldo Library to direct the project. This bibliography containing about 800 entries is the result.

In 1970 the Institute of Public Affairs in the Political Science Department began to direct its attention to environmental problems in Southwest Michigan. This is the first publication of the Institute in this field. We feel the nature of this document and its quality tend to reinforce this first place position. On behalf of the Committee on Environmental Programs and the Institute, I would like to thank all of those who have assisted in bringing forth this publication.

P R E F A C E

The Federal Government is the main publisher of materials on environmental pollution, and this is a selected bibliography of their publications. It is hoped that our students and researchers will be aided by this bibliography in their studies of this important subject which affects the lives of all of us. It is a happy coincidence that we completed our bibliography at the same time that President Nixon established a new federal organization, the Environmental Protection Agency. We hope that our modest efforts will be of assistance in this noble cause.

We have decided to limit the scope of the bibliography to publications on air, water and land pollution covering mainly the years 1965 - 1970. All publications listed are available in our Government Depository Section, third floor Waldo Library.

The bibliography is divided into three sections; air, water and land pollution. These sections are further subdivided into reference materials such as abstracts, bibliographies, directories, guides, laws all of which are annotated, and general materials. The Superintendent of Documents call number is given for each publication.

We acknowledge the conscientious efforts of Nancy Krasean and Richard Fox, graduate assistants from the School of Librarianship, for their help in the tedious work of searching through the vast amount of material.
